**Subject:** Microsoft Settlement

This settlement is an awful bad idea.

Not only are you letting Microsoft buy a verdict from their software, but now they are also beginning to try to monopolize even more markets with their closed API Windows Media format that DVD makers are starting to support.

All I ask, is that you please look into just what Microsoft is trying to do with their position with their market power to monopolize more than just software.

Thank you for your time.
